Observe. Resolve. Check. Apply.

BY ISSUELAB

30 October 2026

The mark and its space

Clear space = one quarter of the cap height on every side.

CORE COLOURS

INK
#11161B

NAVY
#052640

WHITE
#FFFFFF

WORDMARK

Minimum artwork width: 128 px.
Use the endorsed lockup at 240 px or wider.

SYMBOL

Standard symbol: 24 px or larger.
Use the optical micro symbol at 16-20 px.

PRESERVE

Keep proportions and diagonal cut geometry.
Use solid colour and a clear background.

Using the files

Black and navy marks sit on light backgrounds. White marks sit on dark backgrounds.
PNG logo exports include transparent clear space. Minimum sizes refer to the artwork, not the padded canvas.
The wordmark is custom outlined artwork. Supporting copy can use Segoe UI, Arial or a system sans-serif.
Keep the O in the wordmark and the standalone symbol consistent; the micro variant changes only the cut width.

Icons and ready-to-use layouts

APP ICON

MASKABLE / SAFE ZONE

Observe. Resolve. Check. Apply.

Transparent logos	PNG: 512-4096 px wide; symbols: 64-1024 px.
Favicons	SVG plus 16/32/48/64 px PNGs and a multi-size ICO.
Apple / Android	180 px touch icon; 192/512 px icons and maskable variants.
Social	1200 x 630 cards; 1080 x 1080 squares; 1584 x 396 banner.
Video	1920 x 1080 title cards and transparent corner logos.
Print	Scalable vector PDF, SVG and EPS. Colours are RGB.

Handoff and production notes

Choose the source for the job

SVG is the preferred master for websites, decks and design tools. Logo paths do not need a font.

Use transparent PNGs when an app cannot accept SVG. White PNGs will look empty on a white page.

Use the PDF/EPS masters for print. Convert RGB using the printer's own ICC profile when CMYK is required.

Use the square full-bleed icon for Apple and store uploads; the platform supplies the final corner shape.

The rounded icon is for presentations and direct display. Maskable icons have additional safe padding.

Web installation

Copy icons/ together, preserving relative file names. The supplied manifest points to icons beside it.

Set the manifest start_url and scope for the actual hosting path. A manifest alone does not add offline support.

The favicon.svg adapts to light and dark browser themes. favicon.ico uses a navy tile for contrast.

The currentcolor SVG variants inherit CSS colour when placed inline, not when loaded through an img tag.

Source, checking and ownership

source/master.json holds the logo paths. The included build scripts regenerate all deliverables.

The approved image is retained in reference/ for provenance; exports are drawn from the vector master.

No third-party font file is included. File checksums and dimensions are listed in manifest.json.

This pack supplies artwork for ORCA by IssueLab. It makes no trademark-registration claim.
